

What is vis|ability Spaces?

Spaces, a Desktop Client component, lets users create and manage virtual, real-time operating views directly from their desktop. These customizable spaces organize, view, and share critical content across the organization, accessible on any Vis|ability platform display—video walls, desktops, or mobile devices.

- ✓ **Collaboration:** Enable seamless collaboration by providing a unified operating picture that connects operators, management, and field personnel, ensuring everyone works from the same real-time information.
- ✓ **Enhanced Situational Awareness:** When an anomaly occurs, end users can initiate a collaborative session directly from their desktop, bringing together the most relevant personnel and critical content to streamline incident recovery.

Key Benefits

- + **Share to Display Wall:** Collaborative sessions can be seamlessly shared to any destination within the platform, including video walls, enhancing visibility and coordination.
- + **Enhanced Collaboration:** Enables teams to work together in real-time, integrating critical data and inputs from multiple users for more effective decision-making.
- + **Contextual Relevance:** Organizes and presents only the most pertinent information, ensuring focus on what matters during critical operations.
